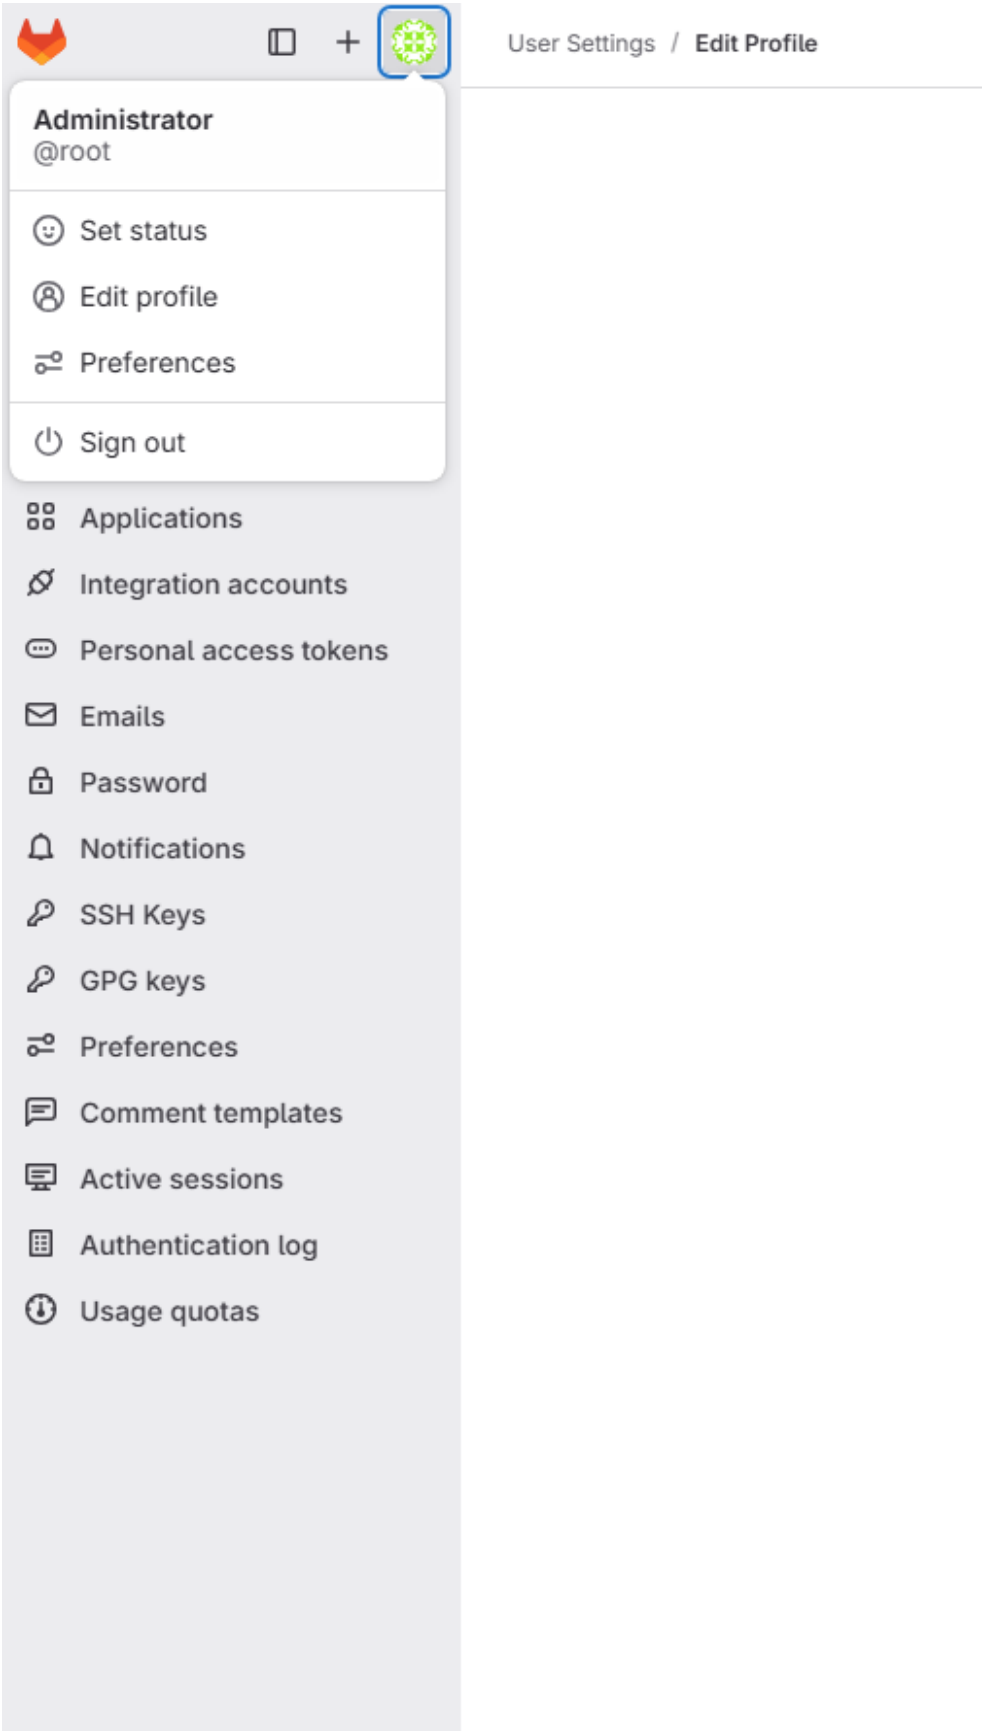
Period 2: How to do source code control gitlab access control và code review

1. Set up admin area for gitlab community eddition
   - Login to server gitlab via ssh
   - Next run commandline:
     user = User.find_by(username: 'root')
     user.password = 'NewPassword!'
     user.password_confirmation = 'NewPassword!'
     user.save!
2. Set up 2MFA
   - Login to server gitlab with root and new password



User Settings / Edit Profile
Administrator

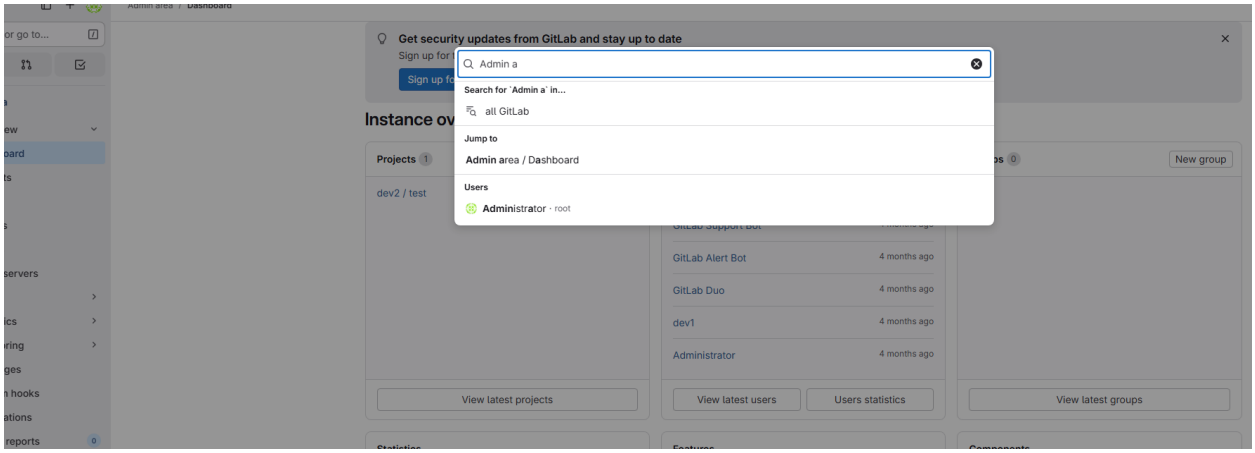
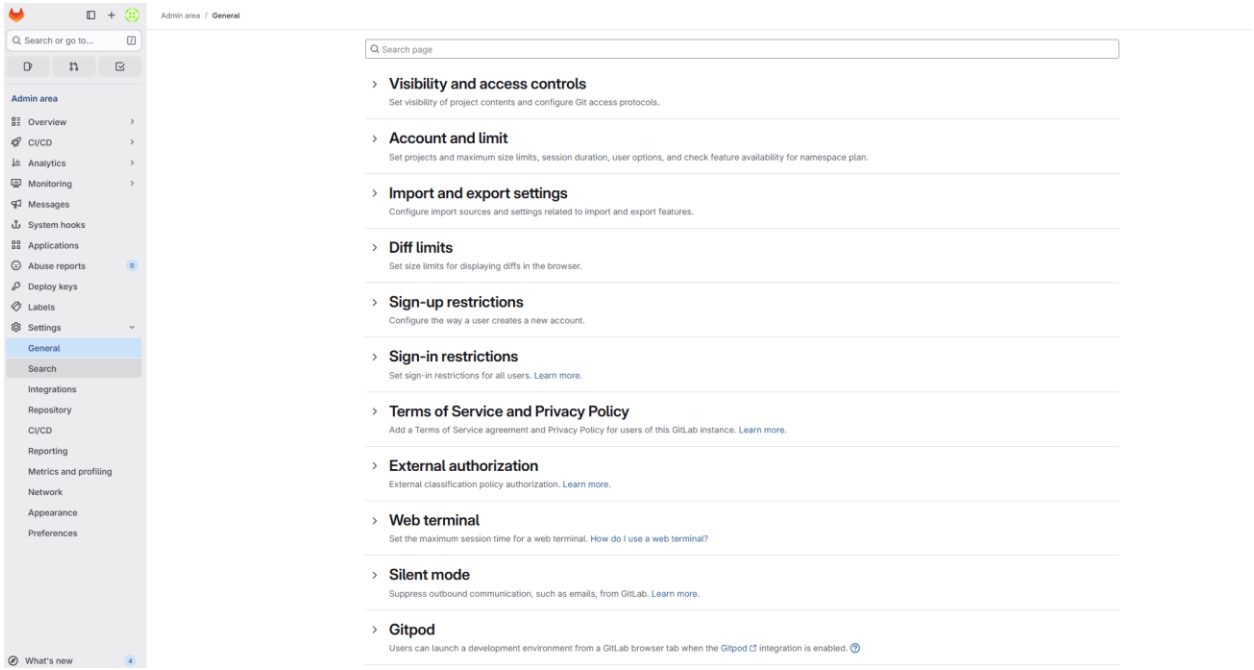
Usage quotas

- And then go to **Admin area**

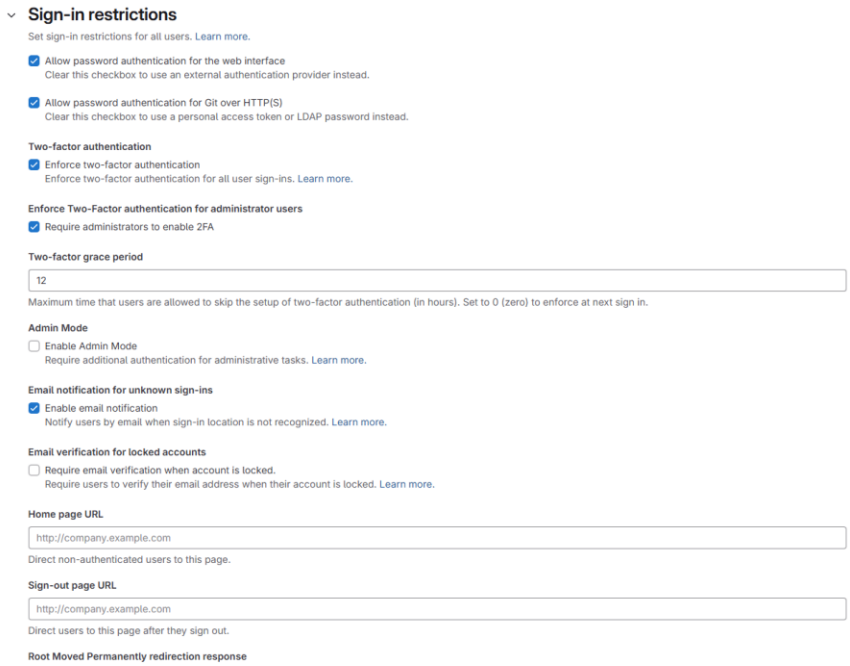


- Next, choose **Settngs -> general**

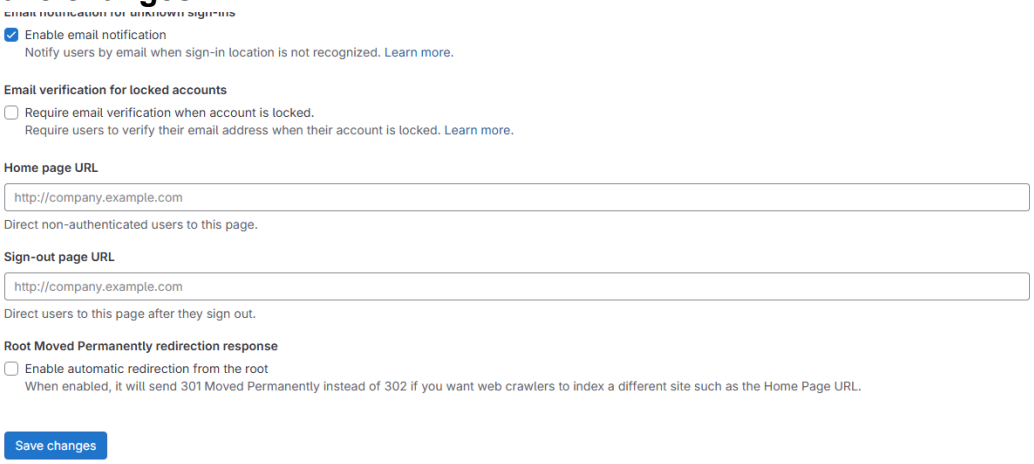


- Choose **sing-in restrictions** and **enable Enforce two-factor authentication, Enforce Two-Factor authentication for administrator**

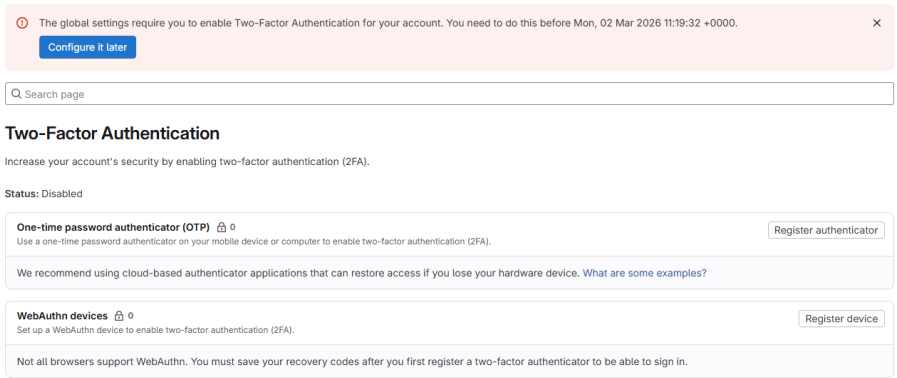
users



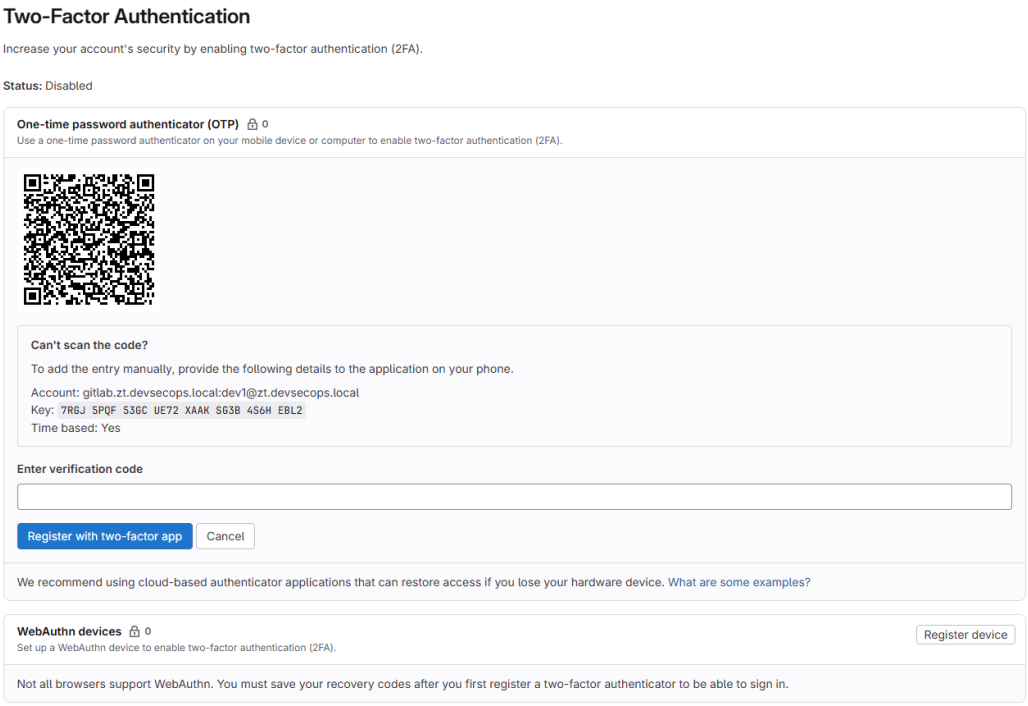
- Finally**, Save changes**

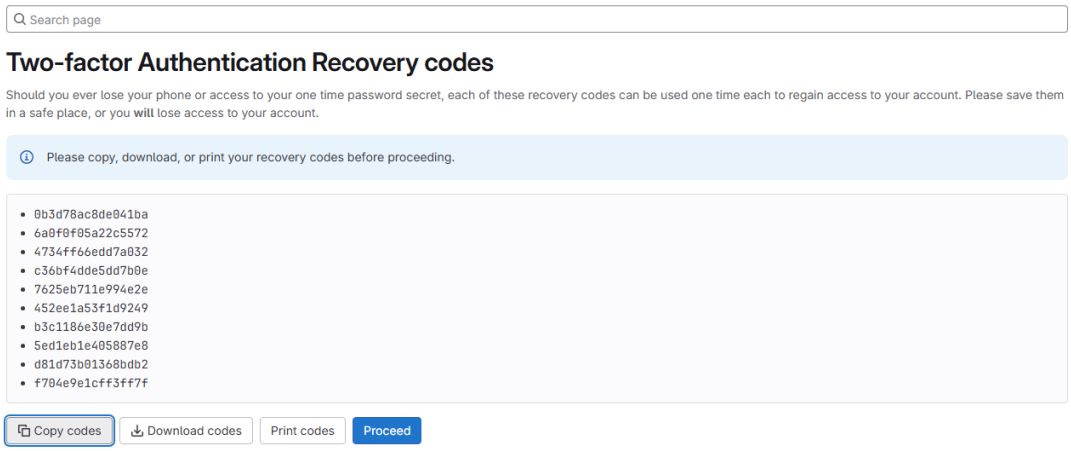


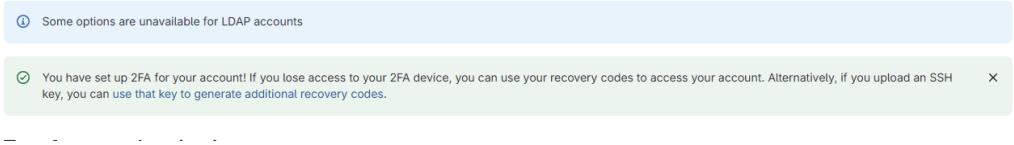
3. Set up 2MFA side user
   - When user login-in succcessfully credentials, they need to set up **2MFA** and have notification from server -> **register authenticator**



- Open authenticator app







- Copy code recovery -> **procceed**
